

Types of products covered by the product emissions standards

To help improve Australia's air quality, the Australian Government has introduced emissions standards for outdoor power equipment and marine engines. Products included are:

- non-road spark-ignition engines with maximum engine power at or below 19 kilowatts used in household and commercial operations
- spark-ignition engines used to propel marine vessels.

The standards do not apply to engines and equipment people already own, or to second-hand engines and equipment.

Examples of typical products covered by the emissions standards

Non-handheld	Handheld	Marine
Air compressor	Brick/concrete saw	Inboard engine
Brick elevator	Concrete vibrator/deaerator	Jet boat engine
Cherry picker/scissor lift	Engines for non-road equipment	Outboard engine
Concrete grinder	Garden edger	Personal watercraft
Concrete mixer	Hammer drill	Sterndrive engine
Firefighting/water pump	Hedge trimmer	Water scooter
Generator	Jackhammer	
Go kart	Leaf/vacuum blower	
Lawn aerator/corer	Posthole borer/auger	
Leaf/garden vacuum (walk behind)	Powered broom	
Log splitter	Trowel machine (concrete)	
Mini loader	Whipper snipper/line trimmer	
Mulcher/chipper		
Pitch roller		
Plate compactor		
Pressure cleaner		
Push mower		
Ride-on mower		
Rotary hoe		
Slasher (ride on)		
Snow blower		
Stump grinder		

This list is not exhaustive and is for guidance only. It is the engine which is subject to the emissions standards, whether imported or supplied as an engine alone or in equipment.
