

Tasmanian White Gum (*Eucalyptus viminalis*) Wet Forest

Australian Government
Department of the Environment and Energy

Legend

- Major localities
- Vegetation mapping units most closely associated with the ecological community

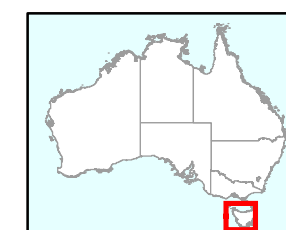

Source:
The distribution of potential White Gum (*Eucalyptus viminalis*) Wet Forest is derived from the Tasmania Department of Primary Industries, Water and Environment's TASVEG, the Tasmanian Vegetation Map dataset. The following Vegcodes were mapped; 'WVI', 'DVF'.

This map represents possible occurrences of the ecological community based on comparable vegetation mapping data. Ground truthing is required to verify if a particular site meets the required diagnostic characteristics and minimum condition thresholds to be the described ecological community. At this resolution and scale many data points blend together to give an artificial impression of larger intact areas than actually remain.
