

# NVIS Version 6.0 Pre-1750 Theme

## Spatial Data Origin

### Data Origin

### Spatial Data Origin

This map reflects the various sources of spatial data compiled for the National Vegetation Information System (NVIS) Version 6.0 Estimated Pre-1750 Vegetation.

Current state and territory NVIS data are the preferred source. Older NVIS data are used where a state or territory has not provided data for a new version. Gap-filling is usually carried out by the Commonwealth as a temporary solution where there are no NVIS data available. Gap-fill fine scale API data are based on Aerial Photograph Interpretation and have been converted to NVIS format for NSW.

The NVIS is an ongoing collaborative initiative and future improvements to the NVIS database are planned.
